Daisy Cooper

What I created was a apple which is my favorite food. What Chatgpt made was a burger which was randomized. The border and canvas on mine verses the AI's is very different, mine has details while the other is just blank. The AI only created what I asked and no other details. Chatgpt added a "noLoop();" while mine doesn't have this. I also had to delete the first part of the code chatgpt gave because it wouldn't work. It kept coming up with errors so I just deleted the whole part just to make the code work.

This was the part I got rid of: "<!DOCTYPE html> <html lang="en"> <head> <meta charset="UTF-8"> <meta name="viewport" content="width=device-width, initial-scale=1.0"> <title>Burger in p5.js</title> <script src="https://cdnjs.cloudflare.com/ajax/libs/p5.js/1.6.0/p5.min.js"></script> </head> <body>".
